

Fed up refuelling your woodburner?

It may be possible to burn both solid fuel and wood on your appliance. The installation of a multifuel grate* could make this possible.

The frequency of refuelling and the quantity of wood needed to maintain adequate heat output can be underestimated by newcomers to wood burning.

Burning solid fuels gives you more control in respect of efficiency, refuelling and keeping your fire in overnight.

Benefits of burning solid fuel include:

- **more sustained heat**
- **reduced refuelling intervals**
- **overnight burning**

Your local Approved Coal Merchant can supply you with quality solid smokeless fuels which can give you the 'best of both worlds' by allowing wood burning enthusiasts to enjoy the practical benefits of burning solid fuels as well.

For more information or to find your nearest Approved Coal Merchant contact the Solid Fuel Association on 01773 835400, alternatively visit the website
